

Remote Solar 3G/4G Solar Powered Camera

BUILT FROM THE GROUND UP

Spectur has been involved in a process of constant development. Our design is the result of millions of hours of real world testing and experience, in some of the world's most hostile environments.

Spectur's proprietary cloud based system remotely controls every function. The computer hardware, the camera, the code and the server (which controls each camera's functions). It is a complete, fully featured and reliable technology at a very affordable price.

4 powerful features. Our cameras have 4 powerful features built into each system: Live Viewing on demand, Alarms, CCTV and Time Lapse.

Live View During the day, managers at HQ can log into any of the cameras, on any of the sites, to see what's happening. All of the cameras are fed into a single secure web login. They can just click between different cameras on different sites.

Alarms At night and out of working hours, the automatic schedule turns on the cameras Alarm function. If motion is detected, the system issues a loud verbal warning. This is usually enough to

get intruders off site. A large 50w LED light also comes on, and the footage is sent to our Cloud servers via 3G or 4G. While this is happening we send an e-mail alert to the nominated person (or persons), or send alarm to our monitoring station, or they can call police or patrols. Police act if they know there is an intruder on site. Which is different from the reaction they take from a non-camera system alarm.

CCTV recording During the day, anything that happens on site is recorded to a hard disk drive in the camera. This keeps a record of events through the day. If there was an incident through the day the footage is recoverable from the web interface. This helps with any OH&S issues. At night the system can switch to Alarm Mode and turns CCTV recording off.

Time lapse While the project is unfolding the system can take time lapse images which are stored to the Cloud. At the end of the project a Time Lapse movie can be created. As the data can be accessed remotely, there is no need to go to the camera to remove storage devices.

REMOTE LIVE VIEW

- Log on at any time for instant live view.
- The camera sends up to 4 frames per second in full HD *dependant on mobile signal
- Ability to remotely setup update intervals to optimise bandwidth usage.
- View from any computer or smartphone
- View multiple cameras in multiple sites

ALARMS

- Remotely adjustable settings
- Advanced motion detection algorithms
- Spoken warnings
- Computer controlled light
- 1032 blocks that can be turned on or off to minimise false alarms
- Advanced schedules
- Email alerts

- Recordings saved to the cloud
- Instantly accessible footage
- Monitoring station integration

CCTV

- Record all activity in HD
- On camera storage
- Cloud integration
- Full remote access of recordings
- Bandwidth efficient

TIME LAPSE

- Choice of cameras from 2MP-3.4MP
- Remote access
- Remote control of interval
- Cloud storage

WHAT DOES IT COME WITH

- 2MP-3.4MP camera options
- Solar panel
- 50w LED flood light
- 50 AH deep cycle battery
- Powder coated aluminium enclosure

- Solar panel mounting brackets
- Loud speaker and amp
- 64GB on-board storage
- Wi-Fi connectivity

FULL REMOTE TELEMTRY

- Battery levels
- 3G/4G signal strength
- Upload speeds
- Download speeds
- All system parameters are remotely controlled

ADVANCE POWER MANAGEMENT

- Advanced power saving modes
- Remotely programmable settings

MULTIPLE WATCHDOGS

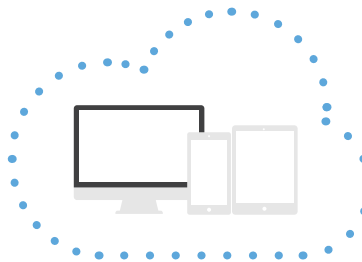

- Hardware and software to manage online status
- Automatic system reboot if necessary

- LIVE REMOTE VIEWING
- SMART ALARMS
- SPOKEN MESSAGES
- INSTANT ALERTS
- TIME LAPSE
- EVERYTHING IN HD
- SECURE WEB ACCESS
- CLOUD RECORDING
- PLUG AND PLAY
- EASY TO INSTALL

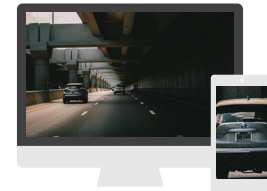

REMOTE SOLAR 3G/4G

Security surveillance

CLOUD STORAGE

Alarm images stored online for maximum security & instant access

EVERYTHING IN FULL HD

Direct to your smart device or computer

SMART FEATURES

Revolutionary technology at your fingertips

1. Smart Alarm triggered
2. Cameras record to the cloud
3. Spoken warnings scare away intruder
4. Alerts sent via email or to a monitoring station
5. View the cameras live from your smart device

DETER INTRUDERS

WEB & APP INTERFACE

App Available for IOS and Android
