Features

Connect using 4G and mobile broadband for reliable connectivity. Enjoy unlimited data for seamless streaming and for connecting remote cameras effortlessly.

Hosted in Australian Data Centres for enhanced security. Guaranteed uptime for uninterrupted surveillance.

Flexible storage options to suit your needs. Automated backups for data protection.

No need for a Network Video Recorder (NVR). Easily integrate with existing networks Automated network management for hassle-free setup.

Access your network securely via a mobile app.

Compatible with a wide range of cameras, over 6,000 supported. Integrate smart analytic solutions for enhanced surveillance capabilities.

SECURE GO

Cloud-Based Video Surveillance Solution

From just 1 single camera to a thousand cameras, the platform allows you to seamlessly scale a network up or down as needed - with no onsite hardware or networking required, just plug-in and go.

Making it perfect for mobile or remote cameras. Secure Go is 100% private and secure, and already in operation with a number of Australian companies & government organisations who demand top-grade solutions. Just like renting a car, VSAAS saves you the time & money associated with owning and maintaining hardware and complex IP networks.
